SECTION 01

EXECUTIVE SUMMARY

SYSTEM OVERVIEW

Lifeplus Asset Management is a powerful, enterprise-grade project and resource management tool designed to track your assets easily. With Lifeplus Asset Management, organizations can systematically organize and govern their company assets.

The platform comes fully featured with comprehensive modules including component asset management, core asset tracking, preventative maintenance management, dynamic location tracking, and integrated QR label generation, ensuring a unified approach to physical infrastructure governance.

SECTION 02

CORE CATALOG MANAGEMENT

MODULE COMPONENT	CAPABILITIES & FEATURES
 1. Asset Management	■ Create a unique digital record for every company asset. ■ Store asset codes, serial numbers, models, categories, locations, conditions, and status information. ■ Record purchase costs, suppliers, brands, warranties, and acquisition dates. ■ Assign assets to employees, departments, branches, projects, or operational locations. ■ Monitor assets from acquisition and deployment through retirement or disposal.
 2. Component Management	■ Register accessories, spare parts, consumables, and reusable components. ■ Maintain quantity, specification, supplier, brand, storage location, and availability information. ■ Issue components to assets, employees, departments, projects, or work locations. ■ Track available, allocated, returned, damaged, and replacement quantities. ■ Maintain component usage history for stock and replenishment planning.

LIFECYCLE & TRACKING OPERATIONS

 ASSET & COMPONENT TRACKING ■ Track every item by location, status, responsible person, department, and condition. ■ Record check-out, check-in, transfer, return, replacement, retirement, and disposal activities. ■ View the complete movement history of every asset or component. ■ Monitor transfers between branches, offices, warehouses, rooms, and project sites. ■ Support stock verification, loss investigation, and audit requirements.	 QR CODE LABEL GENERATION ■ Generate a unique QR code for every asset or component. ■ Print and attach QR code labels to physical items. ■ Scan labels to access the relevant digital asset record quickly. ■ Use labels during audits, assignments, transfers, maintenance, and stock checks. ■ Reduce manual data-entry errors with consistent scannable identifiers.
---	--

MODULE COMPONENT	CAPABILITIES & FEATURES
 Asset Maintenance Tracking	■ Schedule preventive maintenance according to dates, usage intervals, or internal service plans. ■ Record faults, repairs, technicians, service providers, outcomes, costs, and downtime. ■ Monitor upcoming, completed, and overdue maintenance activities. ■ Attach service reports, invoices, photographs, and maintenance documents. ■ Use maintenance history to support repair-or-replacement decisions.

SECTION 04

FINANCIALS & VENDOR OPERATIONS

OPERATIONAL DOMAIN	CONFIGURATION SCOPE
 Supplier and Brand Management	■ Maintain supplier, vendor, manufacturer, and brand records. ■ Link suppliers and brands to assets, components, purchases, warranties, and repairs. ■ Store vendor contact details and other important business information. ■ Identify the supplier of a particular asset, model, category, or component. ■ Simplify warranty claims, replacement requests, procurement, and supplier reviews.
 Depreciation Management	■ Record acquisition cost, purchase date, useful life, residual value, and depreciation method. ■ Calculate periodic depreciation automatically. ■ Display the current book value of company assets. ■ Prepare valuation information for finance, budgeting, insurance, and replacement planning. ■ Compare financial value with asset age, condition, maintenance cost, and performance.

SECTION 05

ADMINISTRATION, FILES & ANALYTICS

USER MANAGEMENT

- Create profiles for administrators, managers, technicians, employees, finance users, and auditors.
- Assign role-based access permissions according to user responsibilities.
- Link assets and components to responsible employees or teams.
- Record assignment, acknowledgment, return, and reassignment activities.
- Maintain a clear record of asset responsibility and custody.

FILE MANAGEMENT

- Upload invoices, purchase orders, warranties, manuals, certificates, and photographs.
- Attach service reports and disposal documents to the correct asset record.
- Keep operational and financial documents connected to the relevant asset or component.
- Give authorized users quick access to supporting information.
- Maintain a reliable evidence trail for audits, insurance claims, repairs, and disposal.

RICH REPORTS AND ANALYTICS

- Generate asset inventory, assignment, location, movement, and status reports.
- Produce maintenance, supplier, component, and depreciation reports.
- Filter reports by category, department, branch, employee, supplier, status, or date range.
- Identify aging assets, overdue maintenance, repeated repairs, missing items, and underused resources.
- Export structured information for audits, budgeting, management review, and planning.
