STATUS:	Production Ready	INTERNAL USE:	Yes

TABLE OF CONTENTS

01	System Architecture & Overview	Section 1
02	Admin Control Panel Features	Section 2
03	Live Display Layout (TV Output)	Section 3
04	Operational Workflow Summary	Section 4

SECTION 01

SYSTEM ARCHITECTURE & OVERVIEW

SYSTEM OVERVIEW

The Life Broadcast system is a sophisticated content management system (CMS) paired with a high-fidelity TV/display output interface. It is purposefully engineered to manage and display digital signage contents, doctor profiles, marketing banners, video feeds, and scrolling ticker text for premier healthcare facilities such as LABAID Cancer Hospital and LABAID Cardiac Hospital.

ADMIN CONTROL PANEL

A secure back-end application used by administrators to update branding assets, configure scrolling headlines, and manage the precise ordering of images, banners, and doctor profile slides.

DISPLAY OUTPUT INTERFACE

A dynamic, multi-zone frontend layout optimized for TV screens in waiting areas, seamlessly displaying real-time video, promotional banners, and structured provider information simultaneously.

SECTION 02

ADMIN CONTROL PANEL FEATURES

The back-end dashboard features a sidebar navigation divided into key functional modules enabling granular control over the live broadcast system.

MODULE NAME	CONFIGURATION & CAPABILITIES
 Location Management	Allows administrators to manage contents separated by specific hospital wings or branches. ■ LABAID Cancer Hospital ■ LABAID Cardiac Hospital
 Image Position List & Management	Controls the slider or grid component on the display interface, granting fine-grained control over doctor profiles and banners. ■ ID & Name: Sequential identification and system labels (e.g., dr-01042026-5, BMT). ■ Position: Numerical value determining display priority. ■ Image Preview: Micro-thumbnails of the uploaded asset. ■ Active Toggle: Quick-switch UI to instantly activate/deactivate an asset. ■ Add New Image Form: Upload new graphics and manually define the sequence position.
 Global System Settings	Global variables and assets managed via the Setting dropdown. ■ Headlines: Define the scrolling ticker text running at the bottom of the TV screen. ■ Site Motto: Primary tagline of the organization. ■ System Logo: White/Black logo variations for corporate identity. ■ Favicon: Browser icon configuration.

LIVE DISPLAY LAYOUT (TV OUTPUT)

 RESPONSIVE GRID ARCHITECTURE

The frontend screen is designed with a multi-zone responsive grid layout to display diverse information concurrently without cluttering the screen. This ensures optimal readability in busy hospital waiting environments.

BROADCAST ZONE	CONTENT DESCRIPTION
Zone 1: Video Player (Top Left)	Plays promotional video clips, patient awareness videos, or internal advertisements. Features burned-in or layered subtitles at the bottom of the video window.
Zone 2: Mini Secondary Banner (Bottom Left)	A static or slower rotating graphic slot dedicated to specific announcements, such as congratulations banners, specialized treatment packages, or bone marrow transplant (BMT) notices.
Zone 3: Primary Content Display (Right Panel - Main)	Header Section: Features the facility logo paired with an easy-to-read Hotline Number icon block. Body Profile Section: Shows large-format imagery of medical specialists alongside structured typographic details including: ■ Doctor's Name (e.g., Prof. Dr. Aliya Shahnaz) ■ Medical Degrees (e.g., MBBS, FCPS) ■ Current Academic/Clinical Designations ■ Affiliated Department & Institution
Zone 4: Ticker News (Bottom Footer)	A full-width horizontal scrolling headline running across the entire baseline of the screen, continuously displaying the text defined in the admin settings.

OPERATIONAL WORKFLOW SUMMARY

01. CONTENT UPDATE

The admin navigates to the control panel, enters "General Settings", and alters the headline phone number or announcement text.

02. ASSET DEPLOYMENT

Admin uploads a new doctor profile slide via the "Add New Image" form and assigns it a specific Position No in the rotation sequence.

03. CACHE SYNCHRONIZATION

If changes do not reflect instantly, the admin can trigger the "Clear Cache" button located at the top right of the navigation header to force a system-wide state refresh.

04. LIVE BROADCAST RENDERING

The TV display client, pulling data via API endpoints, shifts the layout dynamically, incorporating updated positions, new imagery, and updated ticker messages seamlessly.
